

Treatments

Early March

- Grass was greener and more dense in front than in rear. Plans were to fertilize front and back, but use a crabgrass preventer in front, as there are no plans for reseeding. For the rear, since there are plans to re-seed, a fertilizer was chosen specifically for new grass.
- Applied **Scotts Turf Builder Starter Food For New Grass** to rear of house.
- Applied **Scotts Turf Builder Halts Crabgrass Preventer with Lawn Food** on front.
- Applied **Scotts Grubex** to front and rear (1 bag covers back and front).
- Reseeded rear of house

To-Do

- Spray Ortho Weed-B-Gone (broadleaf weed killer) on front

Revision #12
